

Datetime Programming For Everyone. Everywhere.

Tai Meng | tai.meng@safe.com

The background is a collage of ocean and rock images, overlaid with a geometric pattern of semi-transparent blue triangles. The top and bottom sections show bright, clear water and white foam from waves crashing against dark, jagged rocks. The middle section is a dark, semi-transparent band where the word "PRECISION" is centered in white, bold, sans-serif capital letters.

PRECISION

Nanosecond Precision

Input Data: 083129.123456789

083129.123456789 -> 08:31:29.123456789

Why?

Nanosecond Precision

Input Data: 083129.123456789

083129.123456789 -> 08:31:29.123456789

Why?

Oracle | SQL Server

High volume transactions | Scientific data

Time Zone Conversions

UTC offset

@TimeZoneSet(06:00:00-07:00, -04:00)

= 09:00:00-04:00

@TimeZoneSet(2017-05-26 06:00:00+00:00, local)

= 2017-05-25 23:00:00-07:00

IANA time zone
Daylight savings

Secure

Disclaimer: if error below, contact me and I'll fix.

Company	Component	
	Date_Time	Howard's libraries: <ul style="list-style-type: none">• Nanosecond precision• Full IANA time zone support• World class support!• Proposed for C++20 or later
	QDate/Time	
	cctz*	
	datetime	
	bdlt	
	DateTime	
	ICU	
	clock	
	date.h/tz.h	

* google/cctz is not an official Google product.

Howard + Boost

```
using nano128_duration = std::chrono::duration<boost::multiprecision::int128_t, std::nano>;  
using nano128_unzoned = date::local_time<nano128_duration>;  
using nano128_utc = date::sys_time<nano128_duration>;
```

There!

Nanosecond precision & IANA time zone support!

Math Invariant

EndTime – **StartTime** = Interval iff
StartTime + Interval = **EndTime**

Examples:

2017-02-28 – 2016-02-29 = 1 year

2016-02-29 + 1 year = 2017-02-28

Type Conversions

Five Datetime Types:

1. Date
2. Time
3. Datetime
4. Time with UTC offset
5. Datetime with UTC offset

Math

- ✓ Dates autocast into datetimes by adding midnight.
- ✗ All other implicit casts are forbidden.

Writing Datetime Values

- ✓ Drop unneeded date, time, and/or UTC offset.
- ✓ Fabricate midnight.
- ✓ Round if extra precision. Don't trim.
- ✗ Do not fabricate date.
- ✗ Do not fabricate UTC offset (or time zone).

Validation & Repair

Input Format: * *, %B %d??, %Y, at %I:%M%p

Output Format: %Y-%m-%d %H:%M:%S

Repair Overflow: Yes

Trigger live preview

Input Data: On Saturday, June 31st, 2017, at 8:30pm

Live preview

On Saturday, June 31st, 2017, at 8:30pm -> 2017-07-01 20:30:00

Leap Seconds

Input Data: 2016-12-31 23:59:60

2016-12-31 23:59:60 -> 2017-01-01T00:00:00

Use Howard's date/tz Libraries!

Proposed for C++20 (or later)

Howard's date/tz libraries

- Open source:
<https://github.com/HowardHinnant/date>
- World class support:
<https://gitter.im/HowardHinnant/date>
- Email: howard.hinnant@gmail.com

Thank you!
